

Random Permutation

Shusen Wang

Random Permutation

Random Permutation

Now, the cards have random order.

What is uniform random permutation?

Number of Permutations

- The permutations of $\{1, 2, 3\}$:
 - 1, 2, 3.
 - 1, 3, 2.
 - 2, 1, 3.
 - 2, 3, 1.
 - 3, 1, 2.
 - 3, 2, 1.
- If a set contains n items, then there are $n!$ permutations.
- The factorial of n is

$$n! = n \times (n - 1) \times (n - 2) \times \cdots \times 3 \times 2 \times 1.$$

Number of Permutations

- The permutations of $\{1, 2, 3\}$:

- 1, 2, 3.

- 1, 3, 2.

- 2, 1, 3.

- 2, 3, 1.

- 3, 1, 2.

- 3, 2, 1.

There are $3! = 3 \times 2 \times 1 = 6$ possible arrangements.

- If the set contains n items, then there are $n!$ permutations.
- The factorial of n is

$$n! = n \times (n - 1) \times (n - 2) \times \cdots \times 3 \times 2 \times 1.$$

Uniform Random Permutations

- The permutations of $\{1, 2, 3\}$:

- 1, 2, 3.

- 1, 3, 2.

- 2, 1, 3.

- 2, 3, 1.

- 3, 1, 2.

- 3, 2, 1.

Sample one of $n!$ sequences uniformly at random.

Uniform random permutation means each of $n!$ sequences is equally likely.

Naively perform uniform random permutation

How to perform random permutation?

Sample a number from the set $\{1, 2, 3, 4, 5, 6, 7\}$ uniformly at random.

6th

How to perform random permutation?

Sample a number from the set $\{3, 5, 7\}$ uniformly at random.

How to perform random permutation?

Sample a number from the set $\{3, 5\}$ uniformly at random.

How to perform random permutation?

Put the remaining card at the end.

6th

How to perform random permutation?

Now, the sequence is a uniform random permutation.

Implementation

Initial State:

A	B	C	D	E	F	G
---	---	---	---	---	---	---

- Assume we have a random integer generator:

```
int k = uniform(int n) ;
```

- It samples one element from $\{0, 1, 2, \dots, n - 1\}$ uniformly at random.

Implementation

Initial State:

A	B	C	D	E	F	G
----------	----------	----------	----------	----------	----------	----------

Randomly sample an element

Permuted:

--	--	--	--	--	--	--

Implementation

Initial State:

Implementation

Initial State:

A	B		D	E	F	G
----------	----------	--	----------	----------	----------	----------

Permuted:

C						
----------	--	--	--	--	--	--

Implementation

Initial State:

A	B		D	E	F	G
----------	----------	--	----------	----------	----------	----------

Fill the hole by moving the rest elements leftward.

Permuted:

C						
----------	--	--	--	--	--	--

Implementation

Initial State:

A	B		D	E	F	G
----------	----------	--	----------	----------	----------	----------

Permuted:

C						
----------	--	--	--	--	--	--

Implementation

After 1 Iteration:

A	B	D	E	F	G	
----------	----------	----------	----------	----------	----------	--

- $O(n)$ time complexity (on average) for sampling one element.
- Overall time complexity: $n + (n - 1) + \dots + 2 + 1 = O(n^2)$.

Fisher-Yates Shuffle

Initial State

Elements:

A 0	B 1	C 2	D 3	E 4	F 5	G 6
---------------	---------------	---------------	---------------	---------------	---------------	---------------

Iteration 0

Elements:

A 0	B 1	C 2	D 3	E 4	F 5	G 6
---------------	---------------	---------------	---------------	---------------	---------------	---------------

Randomly sample an element

Iteration 0

Elements:

Swap

Iteration 0

Elements:

C ₀	B ₁	A ₂	D ₃	E ₄	F ₅	G ₆
-----------------------	-----------------------	-----------------------	-----------------------	-----------------------	-----------------------	-----------------------

This is a randomly sampled element.

Iteration 1

Elements:

C ₀	B ₁	A ₂	D ₃	E ₄	F ₅	G ₆
----------------	----------------	----------------	----------------	----------------	----------------	----------------

Randomly sample an element

Iteration 1

Elements:

Swap

Iteration 1

Elements:

C ₀	F₁	A ₂	D ₃	E ₄	B ₅	G ₆
----------------	----------------------	----------------	----------------	----------------	----------------	----------------

This is a randomly sampled element.

Iteration 2

Elements:

C ₀	F ₁	A ₂	D ₃	E ₄	B ₅	G ₆
----------------	----------------	----------------	----------------	----------------	----------------	----------------

Randomly sample an element

Iteration 2

Elements:

C ₀	F ₁	A ₂	D ₃	E ₄	B ₅	G ₆
----------------	----------------	----------------	----------------	----------------	----------------	----------------

Swap it with itself

Iteration 2

Elements:

C ₀	F ₁	A₂	D ₃	E ₄	B ₅	G ₆
----------------	----------------	----------------------	----------------	----------------	----------------	----------------

This is a randomly sampled element.

Iteration 3

Elements:

C ₀	F ₁	A ₂	D ₃	E ₄	B ₅	G ₆
----------------	----------------	----------------	----------------	----------------	----------------	----------------

Randomly sample an element

Iteration 3

Elements:

Swap

Iteration 3

Elements:

C ₀	F ₁	A ₂	G₃	E ₄	B ₅	D ₆
----------------	----------------	----------------	----------------------	----------------	----------------	----------------

This is a randomly sampled element.

Iteration 4

Elements:

C ₀	F ₁	A ₂	G ₃	E ₄	B ₅	D ₆
----------------	----------------	----------------	----------------	----------------	----------------	----------------

Randomly sample an element

Iteration 4

Elements:

Swap

Iteration 4

Elements:

C ₀	F ₁	A ₂	G ₃	D₄	B ₅	E ₆
----------------	----------------	----------------	----------------	----------------------	----------------	----------------

This is a randomly sampled element.

Iteration 5

Elements:

Randomly sample an element

Iteration 5

Elements:

C	F	A	G	D	B	E
0	1	2	3	4	5	6

Swap it with itself

Iteration 5

Elements:

C	F	A	G	D	B	E
0	1	2	3	4	5	6

This is a randomly sampled element.

End of Procedure

Elements:

C 0	F 1	A 2	G 3	D 4	B 5	E 6
---------------	---------------	---------------	---------------	---------------	---------------	---------------

Leave the last element alone.

```
void permute(int arr[], int n) {  
    int i;  
    for (i=0; i <= n-2; i++) {  
        // k is sampled from {0, 1, ..., n-i-1}  
        int k = uniform(n-i);  
        // j is in {i, i+1, ..., n-1}  
        int j = i + k;  
        // put arr[j] at the i-th position  
        swap(arr, i, j);  
    }  
}
```

```
void permute(int arr[], int n) {  
    ➡ int i;  
    ➡ for (i=0; i <= n-2; i++) {  
        // k is sampled from {0, 1, ..., n-i-1}  
        int k = uniform(n-i);  
        // j is in {i, i+1, ..., n-1}  
        int j = i + k;  
        // put arr[j] at the i-th position  
        swap(arr, i, j);  
    }  
}
```

```
void permute(int arr[], int n) {  
    int i;  
    for (i=0; i <= n-2; i++) {  
        // k is sampled from {0, 1, ..., n-i-1}  
        ➡ int k = uniform(n-i);  
        // j is in {i, i+1, ..., n-1}  
        ➡ int j = i + k;  
        // put arr[j] at the i-th position  
        ➡ swap(arr, i, j);  
    }  
}
```

Explain the code

Elements:

i is the current position

Currently, it is the i -th iteration.

Explain the code

Elements:

i is the current position

j is a random integer

Currently, it is the i -th iteration.

Explain the code

Elements:

Currently, it is the i -th iteration.

Time Complexity

Elements:

i is the current position

j is a random integer

- The per-iteration time complexity is $O(1)$.
- Totally $n - 1$ iterations.
- Thus, the overall time complexity is $O(n)$.

Thank You!
